

Happy to help you analyze this "Krushi-ML" folder.

The Krushi-ML folder contains over 289 files, mostly image files, csv files, and folder files. Based on a review of 8 files, the folder is a collection of datasets and an image related to agriculture and crop analysis, likely intended for a Machine Learning project ("Krushi-ML" suggests "Agriculture ML").

The data covers:

- 1. **Indian Crop Production and Yield:** Broad datasets detailing crop area, production, and yield across various states and districts in India over multiple years.
- 2. **Rajasthan-Specific Agricultural Data:** Detailed information focused on districts in Rajasthan, covering crop prices, soil analysis, and water usage/irrigation methods.
- 3. **Crop Disease Image:** A single image of a diseased tomato plant.

Key Topics and Datasets

The documents primarily cover three main topics, each with associated datasets:

Topic	Description	Relevant Files
Indian Crop Production	National-level data on state, district, crop, and season, providing metrics like Area, Production, and Yield for various crops over different crop years.	sanjanahv_indian_crop_production_yield.csv, sanjanahv_crop_production_data1.csv
Agricultural Inputs & Climate	Macro-level data for various states (e.g., Andhra, Assam) linking crop yield to factors like rainfall, fertilizer consumption, irrigation area, CO2 emissions, and maximum temperature over time.	sanjana_climate_change_data.csv
Rajasthan Agricultural Details	Micro-level, district-specific data for Rajasthan focusing on market prices, soil composition (pH, nutrients), and detailed water usage/irrigation methods for specific crops.	sanjana_crop_production_data_rajasthan.csv, sanjana_crop_production_rajasthan_data.csv, sanjana_soil_analysis_rajasthan_data.csv, sanjana_rajasthan_water_usage_data.csv

Detailed Comparison of Rajasthan Data

The Rajasthan-specific data is particularly rich and is split into three main areas of analysis for different districts: crop production/yield, soil analysis, and water usage/irrigation.

File Title	Data Granularity	Key Metrics	Sample Districts
sanjana_crop_production_data_rajasthan.csv	Market Price (INR/quintal)	District, Crop, Market, Date, Price	Alwar, Kota, Nagaur, Jodhpur
sanjana_crop_production_rajasthan_data.csv	Area/Yield/Production	District, Crop, Season, Area (ha), Yield (q),	Jodhpur, Kota, Jaipur, Hanumangarh

File Title	Data Granularity	Key Metrics	Sample Districts
		Production (t)	
sanjana_soil_analysis_rajasthan_data.csv	Soil Composition	Soil Type, pH Level, Organic Matter (%), N, P, K Content (kg/ha)	Jaipur, Bhilwara, Jodhpur, Alwar
sanjana_rajasthan_water_usage_data.csv	Water Metrics	Irrigation Method, Water Consumption (l/ha), Water Availability (l/ha)	Udaipur, Bhilwara, Alwar, Nagaur

Crop Disease Image

The folder also contains a single image of a tomato plant:

- **File:** d38e784f-9bbb-4c1f-84d1-3464ff0dbc16__PSU_CG 2103.JPG
- **Path:** sanjanahv_plant_disease_dataset/Tomato__Tomato_mosaic_virus
- **Content:** This image clearly belongs to a subfolder indicating a plant disease classification dataset, specifically showing a **Tomato mosaic virus** infection. The large number of image files (over 250) suggests the image content forms a significant portion of the Krushi-ML project, likely for training a vision-based model for plant disease identification.

Given this overview, what specific analysis are you looking to perform? For example, are you interested in:

- Comparing crop yields between different states?
- Analyzing the relationship between soil type and crop production in Rajasthan?
- Identifying the most common crops or seasons present in the data?
